Growth in APAC: **Key insights** from FT's High-Growth Companies Special Report

The latest ranking of fast growing companies in the Asia-Pacific region.
Plus: Indian winemakers face change; Chinese AI experts return from US; the biggest threat to China's champions; ticket fees donated to charities; Singapore listings remain scarce.

1 FT ranking: High-growth Companies Asia-Pacific 2026

Singapore and India have the largest number of high-growth companies.

This is the eighth High-Growth Asia-Pacific Companies annual ranking from the FT and Statista, which lists the top 500 companies based on data shared by public and private businesses for revenue growth between 2021 and 2024.

Singapore and India have the most companies in the ranking this year with 101 each. Japan follows with 82, and South Korea 79.

The highest-ranked company is Malaysian ecommerce technology platform Borong, which moves up from second place last year. Its revenue rose to $99.7mn, representing a compound annual growth rate of 295 per cent. The second and third-placed companies are both from South Korea: tax software company Bznav and another ecommerce technology platform, InPock.

For the fourth year running, IT & software companies made up the largest share of the list, at 21.4 per cent, followed by fintech, financial services and insurance with 9.6 per cent, and healthcare & life sciences at 5.6 per cent.

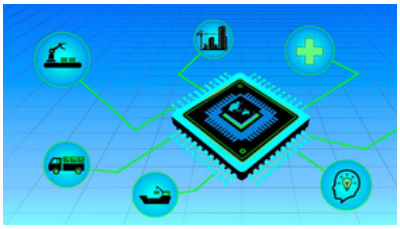

> The concentration of high-growth companies in Seoul reflects various factors including strong local engineering talent and rising investment in AI research and development.
